TECHNICAL HIGHLIGHTS

IC110 HINGED WIRING BLOCK

ICC's IC110 hinged wiring block features a unique swing-out design that allows the wiring to be positioned and installed before the cable is routed.

Installation is easy. Cable access holes on the wiring block allow cables to be routed from behind as opposed to side routing. Anchoring points are incorporated for either cable ties or VELCRO® ties to improve cable routing and security. A knockout is also provided for rear cable entry.

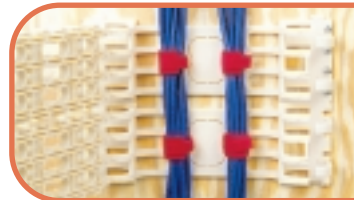

- A** Labeling system
- B** Removable vertical cable management clip
- C** Cable tie anchor point
- D** Cable clip
- E** Cable management block, IC110WHCMS
- F** Cable entry openings
- G** IC110 patch cord

FEATURES

Swing open design allows ease of installation.

Cables may be routed behind the wiring block.

In the closed position the wiring block cables can be easily terminated.

Opens easily for cable routing modifications.
