

MXview

Industrial network management software designed for converged automation networks

- Event Playback records network events, and replays past network incidents
- Discovers and visualizes network devices and physical connections automatically
- Provides central management of configurations and firmware for Moxa devices
- Supports third-party devices with MIB compiler and MIB browser
- Provides comprehensive reports, including inventory, traffic, and availability reports
- Generates OPC 2.0 compliant tags automatically to integrate with SCADA/HMI applications

Introduction

Moxa's MXview network management software is designed for configuring, monitoring, and diagnosing networking devices in industrial networks. MXview provides an integrated management platform that can discover networking devices and SNMP/IP devices

installed in subnets. All selected network components can be managed graphically via web browser from both local and remote sites—anytime and anywhere.

Visualization

- Discovers up to 2,000 Moxa devices and SNMP/ICMP devices within scan range
- Visualizes redundant link status and device roles of network redundancy protocols
- Graphic VLAN groups and IGMP snooping roles visualization
- Device front panel visualization, including ports and LED indicators
- Visualizes managed PoE device power consumption
- Displays third-party device icons

Network Diagnostics and Event Notification

- Event Playback records network events, and replays past network incidents
- Generate trend graphs to track bandwidth utilization and error packet rate statistics, accurate to four decimal points
- Detect problems in real-time with SNMP trap/inform, or periodic polling
- Configurable event notification alarms sent through SMS and email, or locally through program notifications and audio alerts
- Real-time device availability monitoring
- Supports third-party devices with MIB compiler and MIB browser
- Collaborates with third-party NMS through SNMP traps
- Generates OPC 2.0 compliant tags automatically to integrate with SCADA/HMI applications.

Comprehensive Reports

- Maintains device availability reports and records for up to 90 days
- Generates an inventory report for each device in the network
- Compiles comprehensive device properties report
- Generates network traffic trend reports

Availability and Inventory Report

Centralized Configuration and Firmware Management

- Bulk deployment of device configurations and firmware
- In one click, back up the entire MXview database in one click, including topology, job scheduling, events, and device properties
- Scheduling for periodic configuration backup
- Save history of configuration changes
- Comparison tool for checking differences between 2 configurations

System Requirements

CPU	2 GHz or faster dual core CPU
RAM	2 GB
Hard Disk Space	10 GB
OS	Windows XP Professional, Windows 7 (32/64-bit), Windows Server 2008 (32/64-bit)

Ordering Information

Commercial Versions

MXview-2000: Industrial network management software with a license for 2000 nodes (by IP address)

MXview-1000: Industrial network management software with a license for 1000 nodes (by IP address)

MXview-500: Industrial network management software with a license for 500 nodes (by IP address)

MXview-250: Industrial network management software with a license for 250 nodes (by IP address)

MXview-100: Industrial network management software with a license for 100 nodes (by IP address)

MXview-50: Industrial network management software with a license for 50 nodes (by IP address)

License Upgrade

MXview Upgrade-50: License expansion of MXview industrial network management software by 50 nodes (by IP address)

Trial Version

MXview Trial Version: A free trial version of MXview is available for download from Moxa's website

Package Checklist

- MXview CD (includes the MXview software and related documents)
