

MPAX PERSONALITY MODULE SELECTOR GUIDE FOR EPAX

Our large displays have various input options, determined by the installation of a MPAX personality module. These MPAX modules are based on standard PAX panel meters, and use the same data sheet as the PAX meter for specifications and wiring.

About the MPAX Input Modules

The MPAX Module serves as the input to the E PAX Display. There are several different modules to cover a variety of inputs. The MPAX module provides input scaling which allows the E PAX to display most any engineering unit. Once the MPAX is inserted into the E PAX, the unit has the same functions and capabilities of our PAX Series Intelligent Panel Meters. A full set of PAX programming instructions will be included with the MPAX module.

Selecting Your Display Components and Option Cards

To build a complete display unit, you will need an EPAX and an MPAX Input Module. The EPAX is only a display and will not operate without an MPAX module. Please use the following chart to identify the appropriate MPAX module and EPAX Display that will satisfy your application.
